/lab host="DH10B (phage-resistant)"
/clone lib="NIH MGC 8"
/clone = "Organ: lymph; Vector: pOTB7; Site 1: XhoI; Site 2:
EcoRI; cDNA made by oligo-dT priming. Directionally
cloned into EcoRI/XhoI sites using the following 5'
adaptor: GGCACGAG(G). Size-selected >500bp for average
insert size 1.8kb. Library constructed by Ling Hong in
the laboratory of Gerald M. Rubin (University of
California, Berkeley) using ZAP-cDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies)."

/note=Torgan: Stomach; Vector: pT773-Pac; Site 1: EcoRI;
Site 2: Not1; The \$22SNU16 library was contributed by the
Soares laboratory and it was constructed as described by
Bonaldo, M.F., Lennon, G. and Soares, M.B. (1996), Genome
Research 6(9): 791-806. RNA was prepared from harvested
cells of SNU-16 culture. SNU-16 cell was obtained from
Sorean Cell Line Bank (KCLB). SNU-16 was established from
ascitic fluids of Korean patients by Park J.G. et al.

   The present sequence is that of a polynucleotide encoding a fragment of novel low density lipoprotein binding proteins (LBPs) of the invention (see AAB82797-820). LBPs are capable of binding to native and methylated low density lipoproteins (LDLs). Isolated polynucleotides encoding novel LBPs and their fragments are claimed, as well as expression vectors, cells and methods of producing the LBPs. This cDNA clone codes for novel human low density lipoprotein (LDL) binding protein LBP-2 (see AAW49041). It was isolated by screening human liver, aorta and foetal brain cDNA libraries with rabbit LBP-2 cDNA. cDNA clones (see AAW3804-39) and encoded rabbit and human LBPs (see AAW49037-42) are claimed. An abnormality in LBP metabolism or structure is diagnostic of a risk for atherosclerosis. The invention provides: methods for determining if an animal is at risk for atherosclerosis (e.g. for prenatal screening); methods for treating atherosclerosis (including gene therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent formation of atherosclerotic plaque; and methods for treating a cell having an abnormality in LBP structure or metabolism. Pharmaceutical and vaccine compositions are also provided, as well as recombinant vectors and host cells used to produce recombinant LBP

The present sequence is that of a partial cDNA encoding novel human low density lipoprotein binding protein 2 (LBP-2, see AAB82803). Clones were consisted from human foetal brain, liver and aorta cDNA libraries using crabbit LBP-2 cDNA as probe A full-length cDNA clone is given in active and are among claimed polymuclectides of the invention that encode convel polypeptides capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments can danalogues of them, as well as expression vectors, cells and methods cof atherosclerosis, methods for evaluating an agent for use in treating catherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed, pharmaceutical compositions, cc are also claimed polypeptide or nucleic acid, and vaccine compositions, or

The polynucleotide and probein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias, wound healing; neurological diseases such as cerebral anoxia and epilepsy; and infectious diseases
New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonish the sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of the coding region of the human gene (see CC also AAH26494) encoding novel human low density lipoprotein binding CC protein 2 (LBP-2, see AAB2206). The gene was isolated from a genomic DNA CC library using LBP-2 cDNA as probe. The LBP-2 protein predicted from the CC present sequence differs from that predicted from a cDNA clone (see CAAB2203) in that it contains an additional 321 amino acids at its N-CC terminus (the cDNA is a 5' truncation). LBP-2 nucleic acids are among CC claimed polymucleotides of the invention that encode novel polypeptides (capable of binding to native and methylated LDL. Also claimed are compared to them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for catherosclerosis, and methods for treating an agent for use in treating atherosclerosis, and methods for treating an agent for use in treating catherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions, or are also califed.
                                                                                    exon

The DNA was isolated from a human genomic library by screening with LBP-2 CDNA (see AAB6494). The open reading frame spans 5 exons. Human LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods for determining if an animal is at risk for atherosclerosis, and methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-MAR-2000; 2000US-00517849.

The present invention describes proteins and their fragments (I) encoded CC by chromosome 2 of the human malarial parasite, Plasmodium falciparum. CC Also described are: (1) nucleotide sequences (II) encoding (I); and (2) CC vaccines against P. falciparum infection comprising (I) or (II). (I) and (CI) are useful for the development of vaccines against P. falciparum CC infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection CC of infection with P. falciparum. Furthermore, (I) (especially when they CC are rifins or secreted or membrane proteins) can aid the identification CC of drugs to treat or prevent P. falciparum infection, or they can be used CC to identify drug resistance in P. falciparum. Sequencing of the CC plasmodium chromosome 2 and the subsequent identification of proteins CC a process hampered by the complexity of the parasitic lifecycle, and CC provide new targets for vaccine and drug development. Parasite resistance CC of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA7027 and AAB18144 to AAB18352 CC represent nucleotide and protein sequences given in the present CC invention, but which are not specifically mentioned within the

The NNX3 mRNA and/or protein is useful as a marker for lung tumors or Hodgkin's disease. The proteins form pharmaceutical compositions useful for treating lung tumors and/or Hodgkin's disease. Polynucleotide products of the invention form an assay for screening the expression of these nucleic acids. Antibodies raised against the proteins of the invention form an assay for detecting the proteins. The probes form an assay for detecting and/or amplifying NNX3 polynucleotides. The expression of NNX3 in humans and mice suggest that NNX3 is useful as a marker for lung tumors and Hodgkin's disease. This control of the protein facilitates therapies for these conditions. This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             reporter gene expression system linked to an expression-repressing telomere sequence, and binding compounds, e.g. antibodies, may be detected by complex formation with telomerase components. The products may be used as antitumour, antiseptic or contraceptive agents, in infertility diagnosis, or in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  genes combine with telomerase to repress telomere silencing of gene expression. Oligonucleotides from the sequence may be used to detect non-ciliate telomerase-associated genes, e.g. in tumour, pathogen, sperm or ownm cells. New telomerase-associated sequences may be detected by a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cerevisiae telomerase, a ribonucleoprotein required for telomere replication. Other genes associated with telomerase are given in (telomerase RNA template gene) and AAT27046-50 (other STR genes).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel telomerase associated polypeptide (s) and related nucleic acid useful for detecting e.g. tumour cells or pathogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cbs

New Arabidopsis thaliana nucleic acid for identifying homologous producing compositions that modulate the expression or function cencoded protein, and mapping functional regions of protein.

Yu Y;
JP, Haas W
Hoffman N;

ΨĎ,

Claim 1; SEQ ID NO 559; 49pp + Sequence Listing; English

Comprising a sequence capable of hybridising under strangent conditions comprising a sequence capable of hybridising under strangent conditions considered from any one of 998 sequences (ABN99231-ABN99231). CC given in the specification or its fragment. A polypeptide (II) encoded by CC (II), a transgent plant (III) comprising an exogenous nucleic acid or a CC genetically modified cell (IV) comprising an exogenous nucleic acid, is cuseful for screening a candidate agent for its biological effect. (I) is CC useful for screening a candidate agent for its biological effect. (I) is compositions that modulate the expression or function of its encoded CC protein, mapping functional regions of the protein and in studying CC associated physiological pathways. (I) is also useful for the genetic composition of cells, particularly plant cells. (I) is also useful in Screening assays of various plant strains to determine the strains that CC are best capable of withstanding a particular disease or environmental CC agents, e.g. fungicides, insecticides, etc., for elucidating biochemical CC pathways. The screened agents are useful for screening of biologically active capable of proteins are useful in improved methods of treating crops to prevent or treat disease. (II) are also useful in screening CC programs to identify agents that mimic or enhance the action of tolerance to environmental stress. (I) is also useful for composition of proteins of interest, for establishing the extent to which capation of particular plant, for identifying other mediators that may induce tolerance to environmental stress. (I) is also useful for damage to a particular plant, for identifying other mediators that enhance or induce tolerance to environmental stress, for identifying factors involved in the study of genetic function and regulation, of the printed constitution of the gene or gene products. CC walve. (IV) is useful in the study of genetic function and regulation, for alteration of the printed specification, but was obtained in electronic f The invention relates to an Arabidopsis thaliana nucleic acid (I)

The invention relates to constructing (MI) a strain of diploid fungal collisin which both alleles of a gene are modified, comprising modifying cone allele by insertion or replacement by a cassette having an composition of the selectable marker and modifying other allele by recombination, of a promoter replacement fragment with a heterologous promoter. (MI) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The diploid fungal colls in which both alleles of a gene are modified. The diploid fungal colls having both alleles modified are useful for identifying a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the virulence and/or pathogenicity of a fungus, a gene that contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus cand for identifying a therapeutic agent for treatment of a mammalian compound catabolism, biosynthetic, transporter, transcriptional, carbon compound catabolism, biosynthetic, transporter, transcriptional, carbon compound catabolism, biosynthetic, transporter, transcriptional.

Bax gene. The Bax gene of the invention is useful for identifying Bax-resistant yeast or fungi, identifying, or obtaining and identifying Candida spp. sequences that are differentially expressed in a pathway eventually leading to programmed cell death or identifying inhibitors o inhibitor sequences of Bax-induced cell death. The products of the invention have cytostatic, fungicide; immunosuppressive, virucide and vasotropic activity and can be used in vaccines or for cana there.
                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid representing a synthetic BAX-gene, useful as medicament for treating, preventing and/or alleviating yeast or fungal infections or proliferative disorders, or for preventing apoptosis in certain diseases.

The method is useful for identifying a compound having the ability to inhibit growth or proliferation of C. albicans cells and for treating infection by C. albicans. The present sequence is that of an essential Candida albicans gene used in the method of the invention.

Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   21-DEC-2001; 2001WO-EP015398

The compounds or polypeptides, or the genetically modified organism are useful for preparing a medicament for modifying the endogenic flora of humans and other mammals. The vaccine is useful for immunising against yeast or fungal infections. Apoptosis-related diseases include autoimmune disease, ischaemia, diseases related with viral infections or neurodegenerations. This sequence represents a polynucleotide associated with the Bax gene described in the disclosure of the invention

       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                        Score
